## HOW CAN WE HELP YOU MEET YOUR PROJECT GOALS?

**We are proactive** and we are on top of every job we have a contract to build. We take responsibility for monitoring all of our projects by visiting jobsites early and staying in touch with project superintendents on a regular basis. When we get the call to start, we are ready, the materials are approved and available, everyone's familiar with the project, and we are ready to man the job as required to maintain the schedule.

### We treat the jobsite with respect and provide professional jobsite management with:

- Weekly safety meetings
- On-going everyday cleanup
- Haul our own trash away
- Provide temporary facilities
- Protect materials and tools from theft
- Do our own punch-list
- Keeping our own set of current set of plans
- Protect finished surfaces

We check-in with the project superintendent every day before we start work and discuss schedule, priorities, manpower, conflicts, and issues. Before we leave the jobsite, we again check-in with the superintendent to discuss what's left and what's next.

We care about the overall project goals and will do whatever it takes to make it happen.

When bidding, we are prepared to properly man projects with enough qualified trained workers. We are proud to say that we will provide workers who:

- |                         |                     |
|-------------------------|---------------------|
| • Have ongoing training | • Understands code  |
| • Speak English         | • Know the contract |
| • Can make decisions    | • Run a safe job    |
| • Can read the plans    |                     |

We manage the contract and follow it to the letter, especially relating to change orders. We understand how important it is for everyone to be on the same page. We take care to read and adhere to the subcontracts which clearly lay out how the job will be managed.

We aim to finish ahead of schedule. We price fairly and will get the job done properly. Certainly much better than you expected.
